SUMMARY

Software Engineer with over 2 years of experience specializing in GenAI integration and high-scale distributed systems. Expert in building low-latency UIs with React/TypeScript and scalable backends with Node.js. Proven track record of managing 2,000+ commits and optimizing over 1.2M lines of code to deliver measurable business impact.

SKILLS

- **Frontend:** React 18, TypeScript, Redux Toolkit, Redux Saga, Vite, Tailwind CSS, Material UI, Socket.io
- **Backend:** Node.js, Express.js, Microservices, RabbitMQ, Redis Distributed Locking, Message Brokers
- **Database & AI:** MongoDB (Mongoose), SQL, LLM Integration, Prompt Engineering, Intent Recognition
- **Tools & Infrastructure:** Git, Docker, Nginx, PM2, Prometheus, Grafana, Jest, GitHub Actions

EXPERIENCE

Software Developer (Full-time & Intern)

Jul 2024 – Present

HireQuotient

Bengaluru, India

- **GenAI Copilot Architecture:** Engineered an AI Copilot feature with advanced prompt engineering for intent recognition; implemented a document processing pipeline for job descriptions, improving enrichment accuracy by 30%.
- **Distributed Email Infrastructure:** Designed a distributed email rotation system using Redis for state management and RabbitMQ for queuing; handled 1M+ parallel interactions/hour with 0.2% error rate.
- **Real-time Analytics Dashboard:** Built AI-powered demographic analytics using Socket.io for real-time synchronization and Redux Saga for side-effect management, enabling interactive visualizations for enterprise users.
- **Microservices Refactoring:** Re-architected the outreach microservice into a worker-based model (Twilio/Enrichment workers), utilizing Redis-based distributed locking to ensure high-concurrency reliability.
- **Unified Integration Framework:** Standardized ATS/CRM connections through a repository pattern and provider-based architecture, reducing development effort for new integrations by 60%.
- **SMTP/IMAP Integration:** Developed a full SMTP provider with threaded email tracking and IMAP polling for inbox monitoring, enabling enterprise-grade custom domain email support and automated follow-up workflows.
- **Platform Ownership:** Contributed 2,132+ commits across 4 repositories, reviewing and refactoring 1.2M+ lines of code to optimize system performance and maintainability across the core recruitment ecosystem.

Frontend Developer (Part-time)

Dec 2023 – May 2024

Neuton

Remote

- **Performance Engineering:** Boosted application performance 5x and reduced API response times from 1000ms to 200ms by implementing React Query for data fetching and intelligent caching.
- **Data Visualization:** Integrated React Flow to visualize complex project roadmaps for 500+ users, improving data comprehension for client-facing teams and influencing the product roadmap.
- **State Management:** Implemented Redux Toolkit for centralized state management across multi-step project configurations, ensuring data consistency and seamless user navigation.
- **Core Development:** Launched the corporate website from the ground up using React and TypeScript, resulting in a 25% increase in average user session duration.

PROJECTS

Drift Chat - Real-time Web Platform ([View](#)) ([Source](#))

- Developed a full-stack WebSocket chat platform with sub-100ms latency, supporting 200+ concurrent users via Dockerized Nginx infrastructure and an npm-published modular CLI client.

Doc Matrix - AI Semantic Search ([View](#)) ([Source](#))

- Built an AI document matching UI using Google Gemini for semantic similarity visualization with Levenshtein distance fallback mechanisms to ensure high data accuracy.

EDUCATION

B.Tech in Computer Science and Engineering

Lovely Professional University

July 2025

CGPA: 8.74/10.0
